	User measurement*	Wheelchair measurement
 <p><b>Seat width (SB)</b></p> <p>The seat width determines the user's comfort and performance. It must be wide enough to ensure good weight distribution, but narrow enough to allow easy manipulation of the wheelchair.</p>	 <ul style="list-style-type: none"> <li>Let the person sit on a flat surface.</li> <li>Position vertical blocks left and right of the hips and measure the distance between the blocks.</li> <li>Add approximately 2 cm to cater for winter clothing for the wheelchair measurement.</li> </ul>	 <ul style="list-style-type: none"> <li>Remove the seat cushion.</li> <li>Measure the distance between the outer edges of the seat cover at the rear of the wheelchair.</li> </ul> <p>Ultra-Light / Compact: For the seat width add 0,5 cm to the measured distance.</p>
 <p><b>Seat depth (ST)</b></p> <p>A correct seat depth measurement enables an even distribution of the user's weight across the whole seating base, thereby avoiding pressure points and skin irritation in the area behind the knee.</p>	 <ul style="list-style-type: none"> <li>Let the person sit on a flat surface.</li> <li>Measure the distance from the rear most point of the buttocks/lower back to the hollow at the back of the knee.</li> <li>Subtract approximately 4 cm (depending on user's physique and the legrest angle) to give the wheelchair measurement.</li> </ul>	 <ul style="list-style-type: none"> <li>Remove the seat cushion.</li> <li>Measure the distance from the front edge of the backrest tube (without upholstery) to the front edge of the seat cover.</li> </ul>
 <p><b>Leg length (UL)</b></p> <p>The leg length measurement establishes the correct height for the footplates, which will enable part of the body weight to be taken by the feet. Footplates must have at least 2 cm clearance above the ground.</p>	 <ul style="list-style-type: none"> <li>Let the person sit on a flat surface.</li> <li>Measure the distance from the heel of the shoe to the hollow at the back of the knee.</li> <li>Subtract any cushion thickness to give the wheelchair measurement.</li> </ul>	 <ul style="list-style-type: none"> <li>Remove the seat cushion.</li> <li>Measure the distance from the back edge of the footplate to the front edge of the seat cover (without sagging of cover).</li> </ul>
 <p><b>Front seat height (SHv)</b></p> <p>A correct seat height measurement will ensure the optimum driving efficiency and can give more clearance to fit underneath tables.</p>	 <ul style="list-style-type: none"> <li>Let the person sit on a flat surface.</li> <li>Measure the vertical distance from the ground to the hollow at the back of the knee.</li> <li>This measurement should not be less than the leg length (UL) + 4 cm to allow sufficient footplate clearance above the ground.</li> <li>Subtract any cushion thickness to give the front seat height (SHv) wheelchair measurement.</li> </ul>	 <ul style="list-style-type: none"> <li>Remove the seat cushion.</li> <li>Measure the vertical distance from the floor to the top of the front edge of the seat cover (without sagging of cover).</li> </ul>
 <p><b>Rear seat height (SHh)</b></p>	<ul style="list-style-type: none"> <li>Rear seat height is determined by the front seat height, the seat angle and the seat depth.</li> </ul>	 <ul style="list-style-type: none"> <li>Remove the seat cushion.</li> <li>Measure the vertical distance from the floor to the top of the rear edge of the seat cover (without sagging of cover).</li> </ul>
 <p><b>Backrest height (RH)</b></p> <p>The backrest height is dependent on the user's degree of disability. A correct backrest height should maintain a good posture whilst allowing the permitted freedom of movement.</p>	 <ul style="list-style-type: none"> <li>Let the person sit on a flat surface.</li> <li>Measure the vertical distance from the seat platform to the scapulas.</li> <li>If more trunk support is required, measure from the seat platform up to the required level of support.</li> <li>If less trunk support is required reduce the backrest height in order to improve activity.</li> </ul>	 <ul style="list-style-type: none"> <li>Remove the seat cushion.</li> <li>Remove back cover.</li> <li>Measure the distance from the top of the seat frame to the top of the backrest straps.</li> </ul>

\*To be done by a specially trained person

## Matrix Seating & Positioning Options - THE COMPLETE SOLUTION

The Invacare Seating & Positioning range features a vast array of pressure redistributing cushions from low to very high risk, and a number of backrest styles to suit a variety of postural needs. Below is a selection of the options available on chair, further information on the complete solution can be found on individual prescription forms or alternatively visiting us online at [www.invacare.co.uk](http://www.invacare.co.uk)

### Prescription Guide

Effective seating should provide postural support and comfort, as well as help to reduce the risk of pressure ulcer development. There are a number of extrinsic factors that can influence the effectiveness of a seat cushion in relation to pressure care, our cushions have been designed taking these factors into account explained below.

### Cushion Options - (For additional sizes please refer to the individual cushion prescription form)

#### Matrix Flo-tech Lite

Slimline contoured cushion ideally suited to people at low risk of developing pressure ulcers and for comfort purposes only. The contoured seating surface offers improved stability and postural support.

Low Risk  
Overall height 3"  
Max UW 127kg (20 stone)

#### Matrix Vi

The unique three part foam construction targets skin protection where it is needed most. The Invacare Matrix Vi Cushion is anatomically designed with dual-density, HR foam layers and includes a Visco-elastic foam insert, pre-ischial contour and trochanteric shelf.

High Risk  
Overall height 3.25"  
Max UW 136kg (21 stone)

#### Matrix Libra

Designed with the highest level of skin protection, positioning and adjustability to match the unique needs of the person, the Invacare Matrix Libra Cushion offers a complete solution to provide balance and stability as well as optimize body function.

Very High Risk  
Overall height 3.25"  
Max UW 136kg (21 stone)

### Backrest Options - (For more information please refer to the Matrix brochure)

#### Matrix MX1

A lightweight carbon fibre back, designed for active people who demand peak performance and great looks.

- Lightweight carbon fibre back shell - weighs from approximately 900 grams, including hardware
- Full range of anterior / posterior angle adjustment
- 3" / 75mm of contour depth provides stable midline support
- Carbon fibre shell delivers exceptional support, durability and aesthetic appeal
- Range of three patent pending hardware options available for fitting the back to a wheelchair
- Hardware options provide optimal adjustment for the widest range of applications, ensuring a great fit for the person.

#### Hardware:

Quick release dual mount back cane hardware with quick release tabs.

#### Matrix Elite

Designed to provide precise orientation within the wheelchair for optimal postural support. The attractive, lightweight design appeals to people with active lifestyles.

#### Features :

- 3" Contour Depth
- 40° angle adjustment
- 4" depth adjustment
- 20° rotation
- 136kg (21 stone) Max UW

#### Matrix Elite Deep

Featuring integrated lateral supports to provide trunk support while allowing clearance for the shoulders and hips.

#### Features :

- 6" Contour Depth
- 40° angle adjustment
- 4" depth adjustment
- 20° rotation
- 136kg (21 stone) Max UW

### Bodypoint - Positioning Accessories (Currently only available as spare parts - please refer to the UK Bodypoint price list)

#### Belts

A selection of 2 and 4 point padded hip belts are available, that facilitate aligned, stable pelvic position.

Multiple pull options and buckle styles accommodate a variety of needs

#### Harnesses

Designed to provide shoulder retraction, good head control and to correct shoulder rotation, Bodypoint shoulder harnesses assure comfort, durability and easy care.

#### Foot Supports

Used for stabilising and positioning the feet while still allowing for controlled movement

A comfortable and dynamic alternative to rigid shoe holders or foot straps
